

## AutoLoadBaler

### Patented and unique

Our customers save in average about 2,000 to 4,000 hours every year!

## AutoLoadBaler

### Time saving

The AutoLoadBaler with automatic filling gives you up to 4,000 hours every year. The internal installation and the automatic feeding system save walkways and filling time. Due to that concept annoying tearing of the cardboard packaging is history.

### Advantages at a glance

- Comfortable collection
- High-volume collection trolleys
- No pre-crushing
- No filling- and waiting time
- Less walkways
- Automatic emptying
- High saving of time
- High revenues

### Function

Cardboard filled collection trolleys are pushed in at the side of the AutoLoadBaler. By pushing a button automatic emptying starts. The bottom of the trolley lifts up automatic and cardboard is conveyed by rotors inside the press chamber. With 530 kN pressing force cardboard is compacted into bales.

### Collection trolley

Due to the smooth surface trolleys can easily be cleaned and cartons slide gently out of the trolley. They do not tilt inside as in case of usual metal containers. Furthermore the collection trolleys can be designed individually and can be used as free advertising space.

### Automatic filling

During automatic emptying of the trolley the employee can take a second trolley to continue work. Waiting- and filling time is completely avoided!

*„The overall concept of the AutoLoadBaler with its automatic collection system convinced us. The filling volume and internal installation of the AutoLoadBaler gives us valuable time. Forklift movements could be reduced enormously and the use of the AutoLoadBaler is reliable, comfortable and safe.“*

*Tobias Mettmann, Assistant production manager,  
J.G. Weisser Söhne GmbH & Co. KG*

*„The AutoLoadBaler is one of our process redesign measures we had brought from the exhibition LogiMAT. The AutoLoadBaler needs no control and reduces the number of process steps of our staff to a minimum. The small footprint in conjunction with the internal use inside our warehouse provides the opportunity to relieve the in-house transport. We can collect the trolleys by forklift and thereby the effort of our staff is reduced again. Savings of reduced collection journeys, costs for the hire of containers and higher revenues for cardboard bales are the main advantages.“*

*Valentin Scherzer, Energy Management Division,  
Siemens AG*

*„The AutoLoadBaler was exactly the right decision in order to realise our aim „reduction of long walkways“. Before we had to pay for the disposal - now we receive revenues for our bales.“*

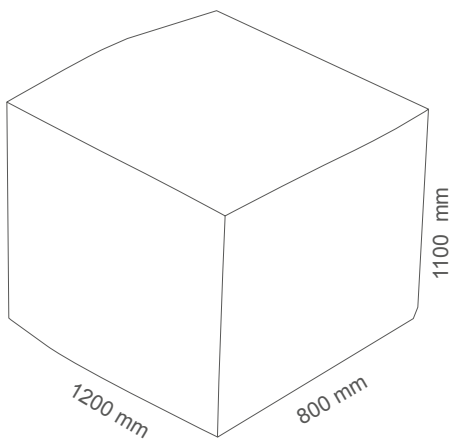

*Bernd Hummel, Head of mechanical engineering,  
AMKA. Müller GmbH & Co. KG*

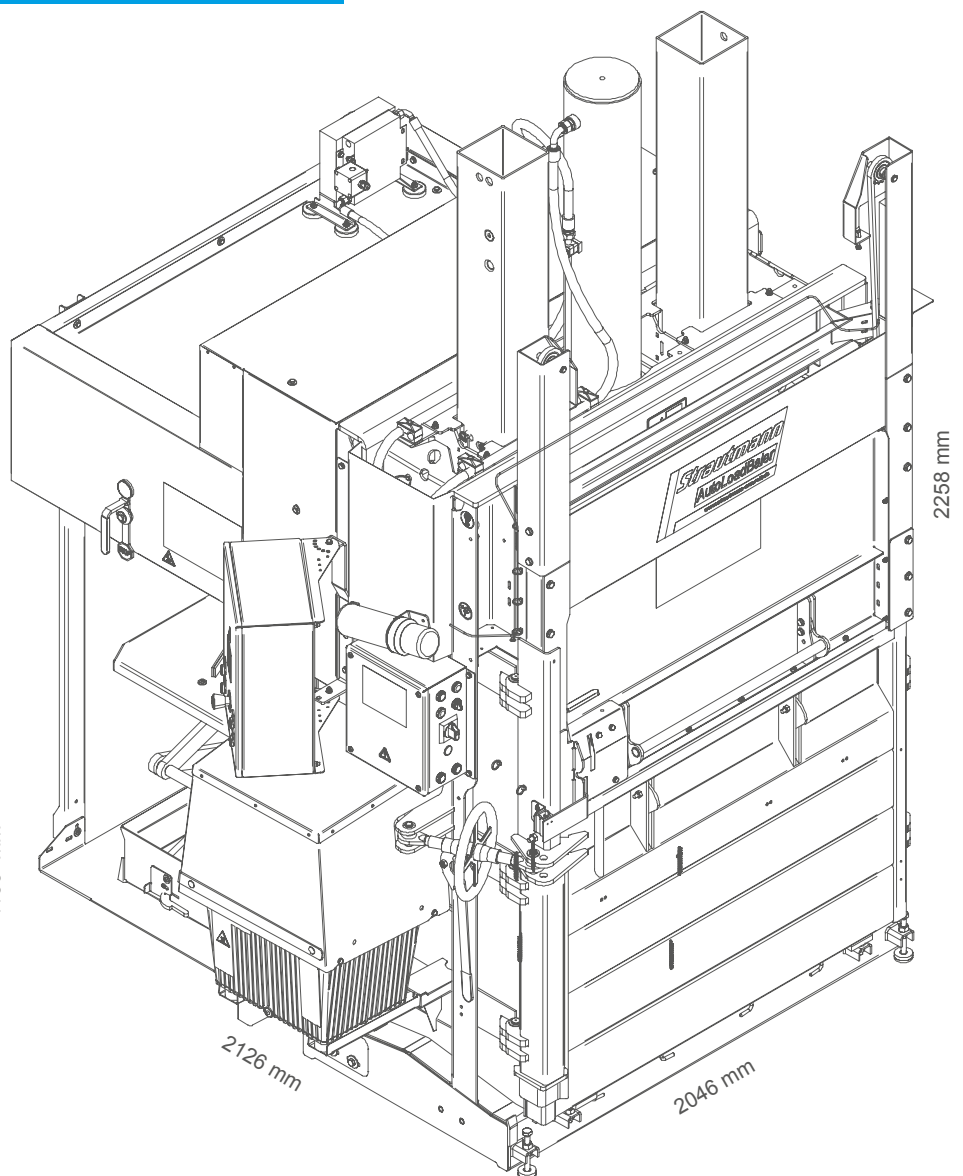

## Small foot print and low installation height

In case of low room height or narrow doors and passages Strautmann can deliver and install the AutoLoadBaler lying horizontally or in two transport packages.

Depending on customer's wish the collection trolley can be inserted at the left or right side.

max. 450 kg direct marketable bales

Strautmann Umwelttechnik GmbH  
Auf dem Haarkamp 22, 49219 Glandorf
