

LiquiDrainer® Our customers report

Secure devaluation.

Flexible use.

'Easy and safe.'

'Through the LiquiDrainer® of Strautmann it is now possible for us to dispose of the resulting reference samples easy and safe. Contrary to the previous operation by hand, the filled and closed bottles are automatically emptied now. The arising PET-bottles are added again to the raw material cycle after compacting by a Strautmann BriKPress.'

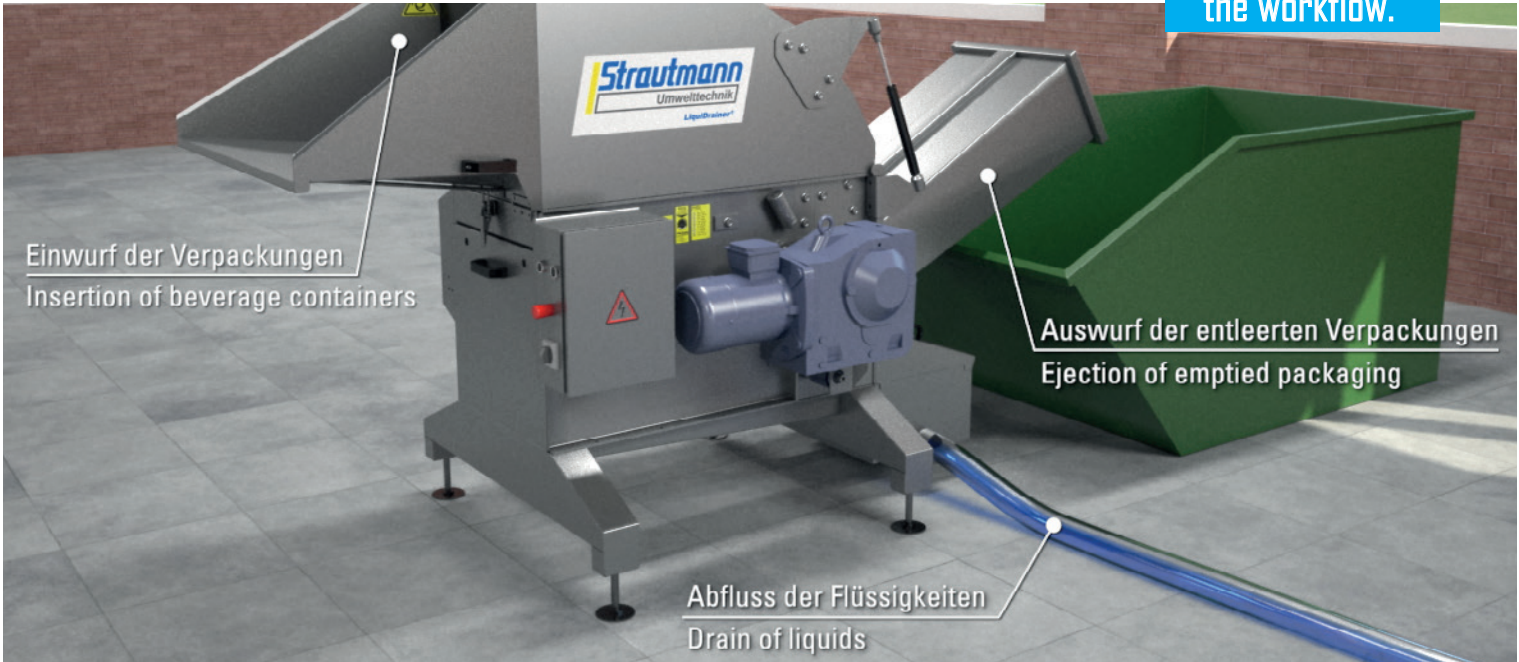

*Josef Foster, Plant Manager,
Siegsdorfer Petrusquelle GmbH*

PETRUSQUELLE

LiquiDrainer®

The Strautmann LiquiDrainer® empties full beverage containers fully automatic, quick and safe. Manual opening by hand is history. The rotor pierces the material, allowing liquid to drain. Within the same step material is devalued. The liquid is collected in the drip pan before it is targeted discharged. The material on the other hand may be compacted afterwards profitably by solutions of Strautmann Umwelttechnik.

**'Optimizing the disposal
costs and improve
the workflow.'**

Einwurf der Verpackungen
Insertion of beverage containers

Auswurf der entleerten Verpackungen
Ejection of emptied packaging

Abfluss der Flüssigkeiten
Drain of liquids

'Economical disposal.'

'In the past bottles were collected in skips and transported to the disposal company. Our starting point was to improve the internal workflow and to optimize the disposal cost. The PET-bottles are now economically drained by Strautmann LiquiDrainer® and compacted with a fully automatic baler into direct marketable bales.'

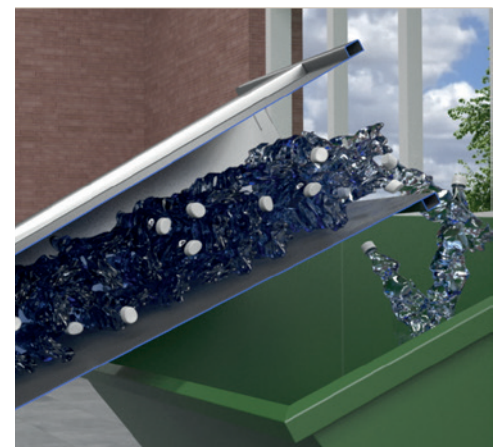

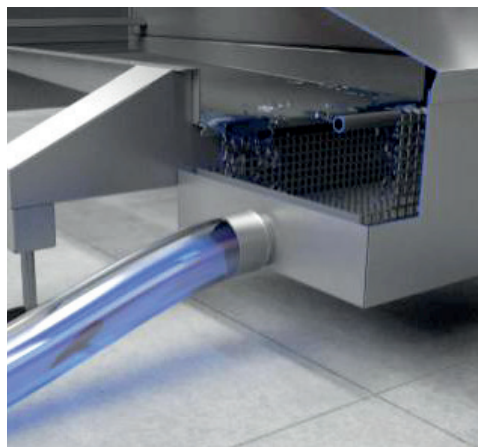

*Thomas Hartsieker, Plant Manager,
Hansa-Heemann AG*

Fast and cost-effective

'At our sites we use many dewatering and briquetting systems of Strautmann as at our location in Neustadt / Aisch where we are for 2 years very satisfied with the LiquiDrainer®. Our expired goods are quite simple, quick and cost effective emptied and destroyed.'

*Jan Neudecker, Head of Purchasing,
Franken Brunnen GmbH & Co. KG*

Filling

The LiquiDrainer® can be filled manually, by forklift, lifting and tipping device or via conveyor belt.

Drainage of liquids

The liquids are targetedly removed and can for example be marketed to organic gas plants.

Ejection of the material

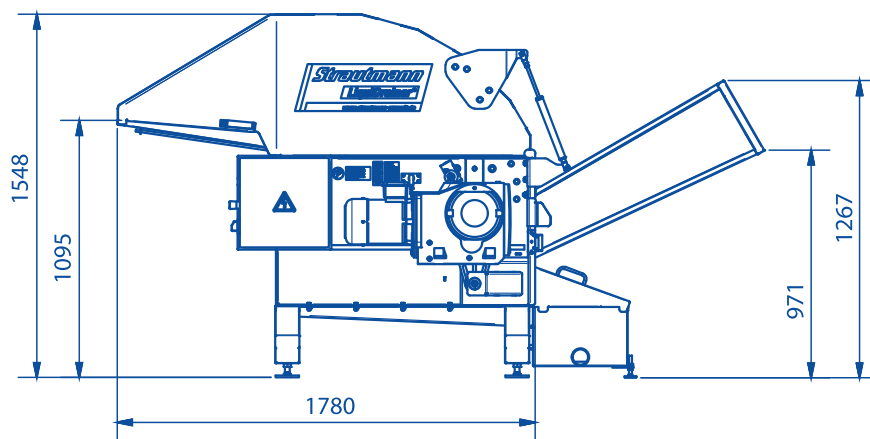

The pre-compacted material is now drained and devalued and can be compacted with briquette- or baling presses.

Powerful

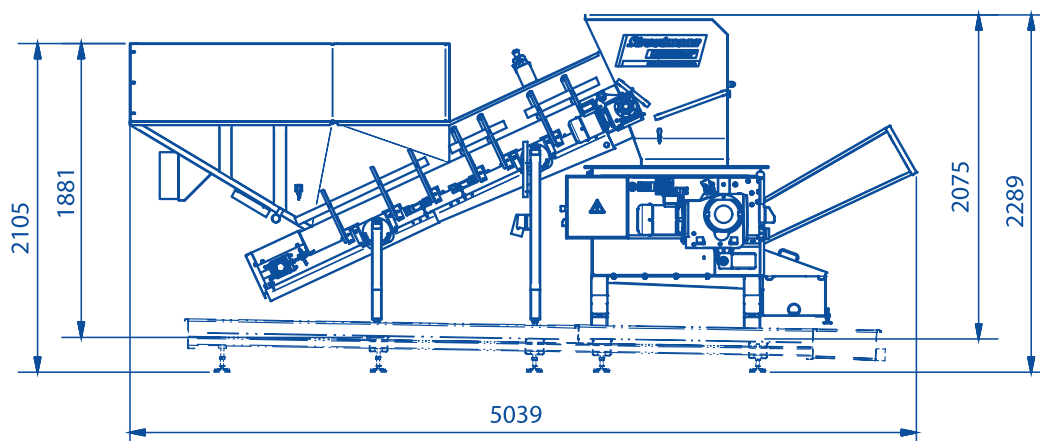

'Because of the powerful LiquiDrainer® we have great time savings. For the beverage production it is very important that the machines also correspond to the hygiene regulations - the LiquiDrainer® does this completely.'

*Dimitri Friedrich, Head of Receiving Department,
Sweet beverage producer*
